PVC Manual Resuscitators

Product Feature

- *Single patient use to reduce the risk of cross-infection
- *Made of 100% medical-grade PVC material
- *100% latex free

Standard Configuration:

PVC resuscitation bag, built-in pressure limiting valve, reservoir bag, oxygen tube, PVC mask

Item No.	Specification	Mask Sizes	Resuscitator Volume	Pressure Limiting Valve	Reservoir Bag
TM8311	Adult	4#	1630ml	60cmH ₂ O	2000ml
TM8321	Pediatric	2#	680ml	40cmH ₂ O	1600ml
TM8331	Infant	1#	340ml	40cmH ₂ O	1600ml
TM8341	Neonate	0#	250ml	40cmH ₂ O	1600ml

● Optional color: ■ Green ■ Blue

● Optional color: ■ Natural

SEBS Manual Resuscitators

Product Feature

- *Single-patient use can reduce the risk of cross-infection
- *Made of SEBS material which is resistant to cold, with good elasticity and more environmentally friendly
- *100% latex free

Standard Configuration:

SEBS resuscitation bag, built-in pressure limiting valve, reservoir bag, oxygen tube, PVC mask

Silicone Manual Resuscitators

Product Feature

- *Reusable and autoclavable, made of medical grade silicone
- *All parts can be easily dismantled for cleaning and disinfecting
- *100% latex free
- *Polysulfone type available

Standard Configuration:

Silicone resuscitation bag, built-in pressure limiting valve, reservoir bag, oxygen tube, silicone mask

Anesthesia Breathing Circuits

Anesthesia breathing circuit is a conventional connection between respiratory equipment such as a ventilator, a face mask, or an endotracheal tube. A heated breathing circuit is designed to warm the gases in the breathing circuit to prevent the condensation of water.

CPR Face Shield with Heart Shape Box

TM8340H:
CPR Face Shield with Nylon bag

How To Use

1. Place the face shield over the casualty's face
2. Continue with chest compressions (A→B→C→A)
3. Open the airway
4. Artificial respiration

Anti-Choking Device-TW8648

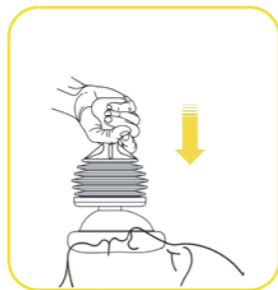

OEM

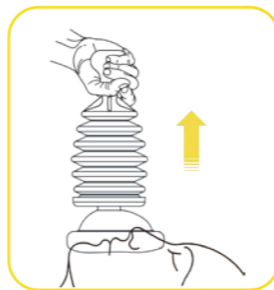

How to use:

●1. Place the mask over the nose and mouth of the person who is experiencing respiratory distress. Use your hands to hold the mask in place, creating a good seal over their face.

●2. Push the plunger down, allowing all air to escape from the one-way valve system, preventing blockages. Avoid pushing further into the person's airway.

●3. While holding the plunger, pull it upwards to create suction. If the blockage does not come out on the first attempt, continue to push and pull until it dislodges. However, do not remove the device from the person's face.
