

Dry brush

Product introduction

Following the steaming peeling, a brushing machine removes the peel from the product. Depending on the desired peeling result and the required capacity, we install drum brush. The brushes in these machines separate the potato peel, which is subsequently removed. As no water is used during the brushing process, the peels remain suitable for further processing into, for example, animal feed.

Equipment details

Parameter

Function	Washing the potato from the peeler to remove the residual peels.
Model	BP3209
Capacity	3-6tons
Dimension	3400*1500*2040mm
Material	SUS304+9pcs brusher
Electrical configuration	
Power	3.75kw
