WNB003 high current power-off switch

DESCRIPTION : WNB003 power main switch high current power-off switch yacht RV battery isolation switch battery switch

Product features:

1. Screw brass plated with tin has good conductivity and stronger oxidation and corrosion resistance
2. Flame retardant nylon shell, resistant to high temperature and not afraid of falling
3. Clear indication of switch gear position
4. Used to protect the power supply and prevent leakage

WNB003 power main switch high current power-off switch yacht RV battery isolation switch battery switch

This battery isolation switch is a reliable and essential component for ensuring the safety and efficiency of your power supply.

Crafted with screw brass plated with tin, our power main switch offers excellent conductivity and enhanced oxidation and corrosion resistance. This ensures a stable and reliable connection, even in demanding environments. The flame retardant nylon shell provides durability and resilience, making it resistant to high temperatures and impact, ensuring longevity and safety in operation.

The clear indication of the switch gear position allows for easy monitoring and control, providing users with a quick and clear understanding of the switch status. This feature enhances the overall safety and convenience of the product, allowing for efficient operation and maintenance.

Our power main switch is specifically designed to protect the power supply and prevent leakage, offering peace of mind and security in power management. With its robust construction and reliable performance, this switch is an essential component for any power system, providing the assurance of safe and efficient power control.

Whether you are in the marine or recreational vehicle industry, or require a high-current power-off switch for other applications, our Power Main Switch is the ideal choice. With its superior conductivity, durability, and safety features, this switch is a valuable addition to any power management system.

Choose our Power Main Switch for a reliable, high-performance solution for your power control needs. Experience the peace of mind that comes with a quality product designed for safety and efficiency.

Product name	WNB003 high current power-off switch
Model	WNB003
material	Screw brass tin plating
Size	72*72*100mm
current	275A
Screw diameter	M10
Applicable scope	yachts, cars, trucks, etc
Product Life	1000 times
Weight	265g
