hasivo, Sichuan

1 Product Introduction

Hasivo 10G L3 Management Switch: All ports have 10 Gigabit line speed forwarding capability and have 1G/2.5G/10G SFP+ ports. This series of switches is designed for applications such as security monitoring, diskless startup, and wireless networking, and has good network adaptability.

characteristic

- ◆ Dynamic LED indicator light, providing simple working status prompts and troubleshooting
- ◆ Support multiple management methods such as HTTP, HTTPS, SSH, Telnet, CLI, etc
- ◆ Support loop detection, STP/RSTP/MSTP spanning tree protocol
- ◆ Support 801.1q VLAN, which can be flexibly divided into VLANs according to requirements
- ◆ Support port aggregation, effectively increase link bandwidth, achieve link backup, static link/LACP
- ◆ For more functions, please refer to the electronic manual

Definition of indicator lights

indicator	definition	state	description
PWR	Power indicator light System indicator	off	The device is not powered on
		on	Not powered on
		1/2(Slow flash)	The device is powered on and the system is running normally
		1/4(quick flash)	Abnormal operation of equipment power on system
1-8(red)	Port 10G indicator light	off	The port is not working in this mode
		on	Port connection successful in 10G mode
		flash	Port connection successfully working Data transmission is in progress in 10G mode
1-8(green)	Port Link/ACT indicator light	off	The port is not working in this mode
		on	Port connection successful
		flash	Port connection successful, data transmission in progress
PoE	Port PoE status indicator light	off	Port without PoE
		on	Port PoE working

Product Supporting List

Non PoE series

PoE series

3 Product installation and precautions

For the safe installation and operation of the switch, we recommend that you:

- Check if the power cord is securely wrapped around the AC power connector, Is the DC cable damaged
- Ensure proper heat dissipation and ventilation around the switch.
- Do not stack heavy objects on top of the switch.

Desktop installation

When installing a switch on the desktop, the device must be placed horizontally on the desktop and kept stable. Please leave enough space between the device and other surrounding objects for ventilation.

Power socket specifications

The standard specifications for a conventional power strip include a single-phase two-wire power socket and a single-phase three wire socket. The three wire socket has a grounding wire in the middle, a neutral wire on the left pin, and a live wire on the right pin. The two-wire socket has no grounding wire. Please check before operation

Power supply socket

Connect the power cord

Check that the power supply matches the power supply indicated on the switch;

Non PoE switch connected to power supply, direct AC 100~240V, 50~60Hz mains power, DC output 12V

PoE switch connected to power supply, direct AC 100~240V, 50~60Hz mains power, DC output 52V

Power Connection Diagram

Check after installation

Please check the following items after installation:

1. Check if there is sufficient heat dissipation space around the switch and if the air circulation is smooth;
2. Check if the power supply of the power socket meets the specifications of the switch;
3. Check that the power supply, switches, racks, and other equipment are properly grounded;

4 How to login to the web interface

1. The switch is powered on and started normally, and any interface is connected to the computer network port used for login management
2. Ensure that the function switch on the front panel of the switch is in the "WEB" position (only for support function switch series)
3. To manage a computer, at least IE 8.0 or above, the latest versions of Firefox, Chrome, and Safari browsers, or one of the browser software using the above core, must be installed
4. The IP address of the network card connecting the management computer to the switch should be in the same segment as the management IP of the switch. When first set, it should be 192.168.0.* (* is any integer between 2 and 254), and the subnet mask should be 255.255.255.0
5. Open the browser and enter the management address of the switch in the address bar. The default address is http://192.168.0.1 Login to the management interface of the switch
6. In the pop-up login window, enter the switch management username and password. The default username and password are both admin

*After setting all configurations, please click on the top right corner: Save

Attentions

To avoid equipment damage and personal injury caused by improper use, please follow the precautions as below:

!Keep the status of power-off during installation, and wear anti-static wrist to ensure good contact between anti-static wrist and skin to avoid the hidden danger.

!The switch can only work normally under the correct power supply. Please confirm that the power supply voltage is consistent with the voltage marked by the switch.

!Before switch on, please make sure that it will not cause overload of the power circuit, so as not to affect the normal operation of the switch or even unnecessary damage.

!In order to avoid the danger of electric shock, do not open the shell up when the switch works, even in the case of no live current, do not open.

!Before cleaning the switch, pull out the power plug. Do not wipe it by using wet fabrics or liquid.

!Install device in the rack-mount regularly from top to bottom, incase of over-load installation.

!Don't place other heavy objects on the surface of the switch to avoid accidents.
