## Notes

---

The Advant Controller 31\*) is a modular-designed, programmable control system.

The series 90 units can be used in a distributed structure.

- **Cable-saving system**

Today's open-loop and closed-loop control systems operate ever faster and are becoming more powerful, but also more complicated. The number of units connected to the central unit is constantly increasing: - contactors, relays, circuit breakers, transducers, push-buttons, indicator lamps and intelligent preprocessors. Connection of these units means increased wiring complexity.

The Advant Controller 31 eliminates this disadvantage and allows the wiring complexity for the control cables to be reduced by up to 80%.

- **Extensive diagnosis**

The Advant Controller 31 reliably detects, locates and displays errors of input and output signals, whether they are discontinuity, overload or short-circuit.

The functions of the CPU and system bus are, of course, monitored continuously.

- **Economical solution**

Not only saving on cables, but also cost cutting at the planning and installation stage make the Advant Controller 31 a system featuring substantial time and cost advantages.

- **Easy modification and expansion of the system**

On the series 90 modules, the plug connectors are of plug-in design. This means that the modules can be exchanged without the need for rewiring.

\*) Former name of control family: ABB Procontic CS31

## Series 90 automation units (programming software 907 AC 1131)

Automation units with on board in-/outputs, distributed expansion capability up to approximately 1000 E/A, with RAM and FLASH-EPROM, real-time clock, interface to the CS31 field bus, online program modification, bit, word and double word processing, isolated; 24 V DC digital inputs, transistor (T) 24 V DC, 0,5 A; analogue inputs, 12 bit resolution, +/- 10 V, 0...20 mA, 4...20 mA, also for 07 KT 97/98 +/-5 V, -50°C ... +40°C, -30 °C ... +70°C or to be used as digital I/Os; analogue outputs, 12 bit resolution, +/-10 V, also for 07 KT 97/98 0...20 mA, 4...20 mA. Power supply 24 V DC. 2 serial interfaces, the second is configurable for ASCII or MODBUS® communication.

Optional Smart Media Card for data storage and user program back-up (see Accessories).

#### Safety for man, machine and the environment

Complying with safety requirements at the highest technical level - that is the purpose of the Advant Controller 31-S. AC31-S is a German Technical Inspection Authority (TÜV) and BG-certified, safety-orientated controller for programming safety and operating functions, i.e. one controller for all functions of a machine or plant.

The inputs and outputs for the safety signals are designed to be redundant internally, and the safety functions in the central unit are programmed by certified user function blocks. All devices of the AC31 family can be used as inputs and outputs for the operating signals. The I/O modules are connected via the CS31 field bus to the central unit 07KT93-S.

Certification is based, amongst other things, on the following Standards (please refer to the certification report for detailed information; we will be pleased to send you this report on request):

- DIN V 19250: Fundamental Safety Considerations for Measurement and Control Safety Devices, **Requirement Category (AK) 4.**
- IEC 65A: Software for computers in the application of industrial safety related systems, system aspects, **Safety Integrity Level (SIL) 2**

- EN954: Machine Safety, Category 3
- EN 60204-1: Machine Safety - Electrical Equipment of Machines Part 1
- DIN VDE 0116: Electrical Equipment of Firing Systems. Requirements Applicable to Safety-Orientated Electronic Components
- DIN EN 298: Automatic Burner Control Units for Gas Burners and Gas Appliances with or without Fan
- NE 31: Plant Safety with Process Control Engineering Equipment, **Class A1**

Typical fields of application include the following:

- Firing systems, gas appliances
- Storage and materials-handling systems, mixing systems
- Construction and container cranes
- Plant construction, environmental engineering
- Traffic signal installations, tunnel construction

# Advant Controller 31-S

## Ordering details

### Safety-related automation unit for programming software 907 PC 33/331/338

Central unit for the programming of safety and operating functions, distributed, 992 I/Os in total, with RAM and FLASH-EPROM, real-time clock, interface to CS31 field bus, second serial port for communication (ASCII), programming software 907 PC 33/331 additional safety modules 907 PC 338, integral ARCNET interface, online program modification, bit and word processing, electrically isolated, 24 V DC digital inputs, 1 of which can be used optionally as 50 kHz counter input, electrically isolated, input delay 7 ms, digital outputs, transistor, 24 V DC, 0.25 A, electrically isolated, short-circuit-proof

07 KT 93-S

SST025 98

For buffer battery, see Accessories

\*) Not safety-orientated

### Programming software

Description	Language	Type	Order code	Wt. / piece kg
Programming and test software, General description of programming environment excl. software (for SW see 907 PC 331)	German English	907 PC 33 907 PC 33	GJP 520 3900 R 0302 GJP 520 4000 R 0302

4 analogue I	4...20 mA		12 bit		07 AI 90-S	GJR 525 1200 R 0202	0.25

### The system

The ABB Procontic T200 programmable logic controller is a modular control system meeting the requirements of the latest automation technology, today and in the future, at the highest technical level.

Due to its modular system and its wide range of units, the ABB Procontic T200 can be configured for any application. The system's simple handling and project planning save time and money.

The ABB Procontic T200 has been fully integrated into the AC31 family. It features a convenient programming technique (907 PC 332) with IBM-compatible PC, has facilities for efficient process display and operation, and can be connected to the ABB Procontic buses, PDnet, ZB20, CS31 and MODBUS.

ABB Procontic systems are designed for rough industrial applications and are therefore sturdy and immune to interference (EMC). Extensive diagnostic functions of the ABB Procontic T200 simplify commissioning and troubleshooting in the plant.

In the simplest case, an ABB Procontic T200 controller consists of a subrack, a central unit, a program memory, several input/output units and a power supply unit for internal power supply.

Expansion subracks - centrally (in the immediate vicinity) or distributed - allow generous space for further input/output modules. Four central units, classified according to expansion capability, and a number of preprocessors and interface units allow the ABB Procontic T200 to be optimally matched to the respective control task.

**Powerful serial bus systems connect in different areas**

- The T200 exchanges process data with the other ABB systems and third-party controls via PDnet.
- The ABB Procontic T200 Bus ZB20 has been designed specifically for data exchange between ABB Procontic T200 stations and, in addition to process data, can also handle programs and parameters.
- Telecontrol applications are networked with RCOM.
- Simple, cross-manufacturer networking with MODBUS.
- CS31 field bus

ABB 99 891

ABB 94 0097

## Fields of application

The ABB Procontic T200-S is a safety-oriented automation system for plant and machines.

If a hazard analysis shows that, in the event of a fault, damage or injury could occur to persons, the environment or equipment, a safety-oriented system is required. This prevents a hazardous state by reverting to a planned safe state in the event of a fault.

The T200-S allows conventional safety circuits to be replaced. More complex safety circuits, which would be impossible or very costly to implement, are also possible.

The T200-S is certified by the German Technical Inspection Authority (TÜV) and the German Employers' Liability Insurance Associations for Requirement Category 4 to DIN V 19250 and Category 3 to EN 954-1. The detailed certification report and the list of application-related standards on which testing was based are available on request.

## Advantages

- One controller for the safety-oriented and non-safety-oriented components of your system
- Reduction in the wiring complexity thanks to a consistently distributed system structure
- Simplification of wiring as the result of inputs/outputs designed internally on a two-channel basis
- Safety-oriented inputs/outputs directly on site in the terminal box
- Comprehensive diagnostic functions
- Safety through diversity-based, redundant software, internally redundant inputs/outputs and secure transfer.
- Mixing of safety-oriented and non-safety-oriented components in one system  
(from the CS31 and T200 module families).

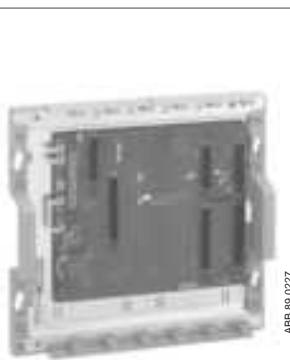

## Programming

Simple, time-saving programming (FBD, LD, IL).

This contains special, TÜV-certified safety function blocks and a permanently predefined structure with the separate programming components "Safety-Oriented" and "Non-Safety-Oriented".

# ABB Procontic T 200-S

## Ordering details

### Subracks

Subracks for T200 components

Power supply unit slot	Central unit slot	Bus coupler slot	I/O slot	Type	Order code		Wt. / piece kg
1	1		5	07 BT 61	GJV 307 4302 R 0001		1.9
1	1		8	07 BT 62	GJV 307 4303 R 0001		2.5

# **Programming CS31, AC31, AC31-S, T200 and T200-S**

---

The following hardware and software is required for programming the CS31, CS31-S, AC31, T200 and T200-S controllers:

## **1. Hardware**

### **1.1. Personal computer for programming software 907 PC 33/331/332/336/338 with:**

- minimum 80386 processor, minimum 4 MB RAM
- minimum 15 MB free hard disk capacity
- 3.5", 1,44 MB floppy disk drive, mouse
- serial port EIA-RS-232 for the controller, parallel port for printer
- MS-DOS operating system, version 5.0 and above

### **1.2. Personal computer for programming software 907 AC 1131 with:**

- minimum Pentium II processor, 133 MHz, minimum 32/64 MB RAM
- minimum 40 MB free hard disk capacity
- CD-ROM drive, mouse
- serial port EIA-RS-232 for the controller, parallel port for printer
- Windows 9x or Windows NT 4.0

### **1.2. Programming cable**

(For further information please refer to the Ordering Details for the individual controllers)

- 07 SK 90 for CS31/AC31 central units - Series 30, 90 (25/9 pin)
- 07 SK 50 for CS31/AC31 central units - Series 40..50 (9 pin/Mini-DIN)
- 07 SK 61 for T200 and T200-S central units (25 pin)
- 07 SK 62 for T200 and T200-S central units (9 pin)

### **1.3. Programming unit for EPROM's (only T200 and T200-S)**

An EPROM programming unit for EPROM types upwards of 1 Mbit is required.

The unit must be capable of processing Intel-hexadecimal files.

## **2. Software**

### **2.1. Programming software and documentation for central units ABB Procontic and Advant Controller**

(For further information please refer to the Ordering Details for the individual controllers)

- 907 PC 33. General section for CS31/AC31, T200 and T200-S. Documentation (no software) for programming software.
- 907 PC 331. System-specific section for CS31 central units and communication processor 07KP62 (T200). Documentation and software.
- 907 PC 338. Add-on safety function package AC31-S.
- 907 PC 332. System-specific section for T200 central units. Documentation and software.
- 907 PC 336. System-specific section for T200-S central units. Contains software 907 PC 332 including German Technical Inspection Authority (TÜV)-certified safety function blocks and safety manual.

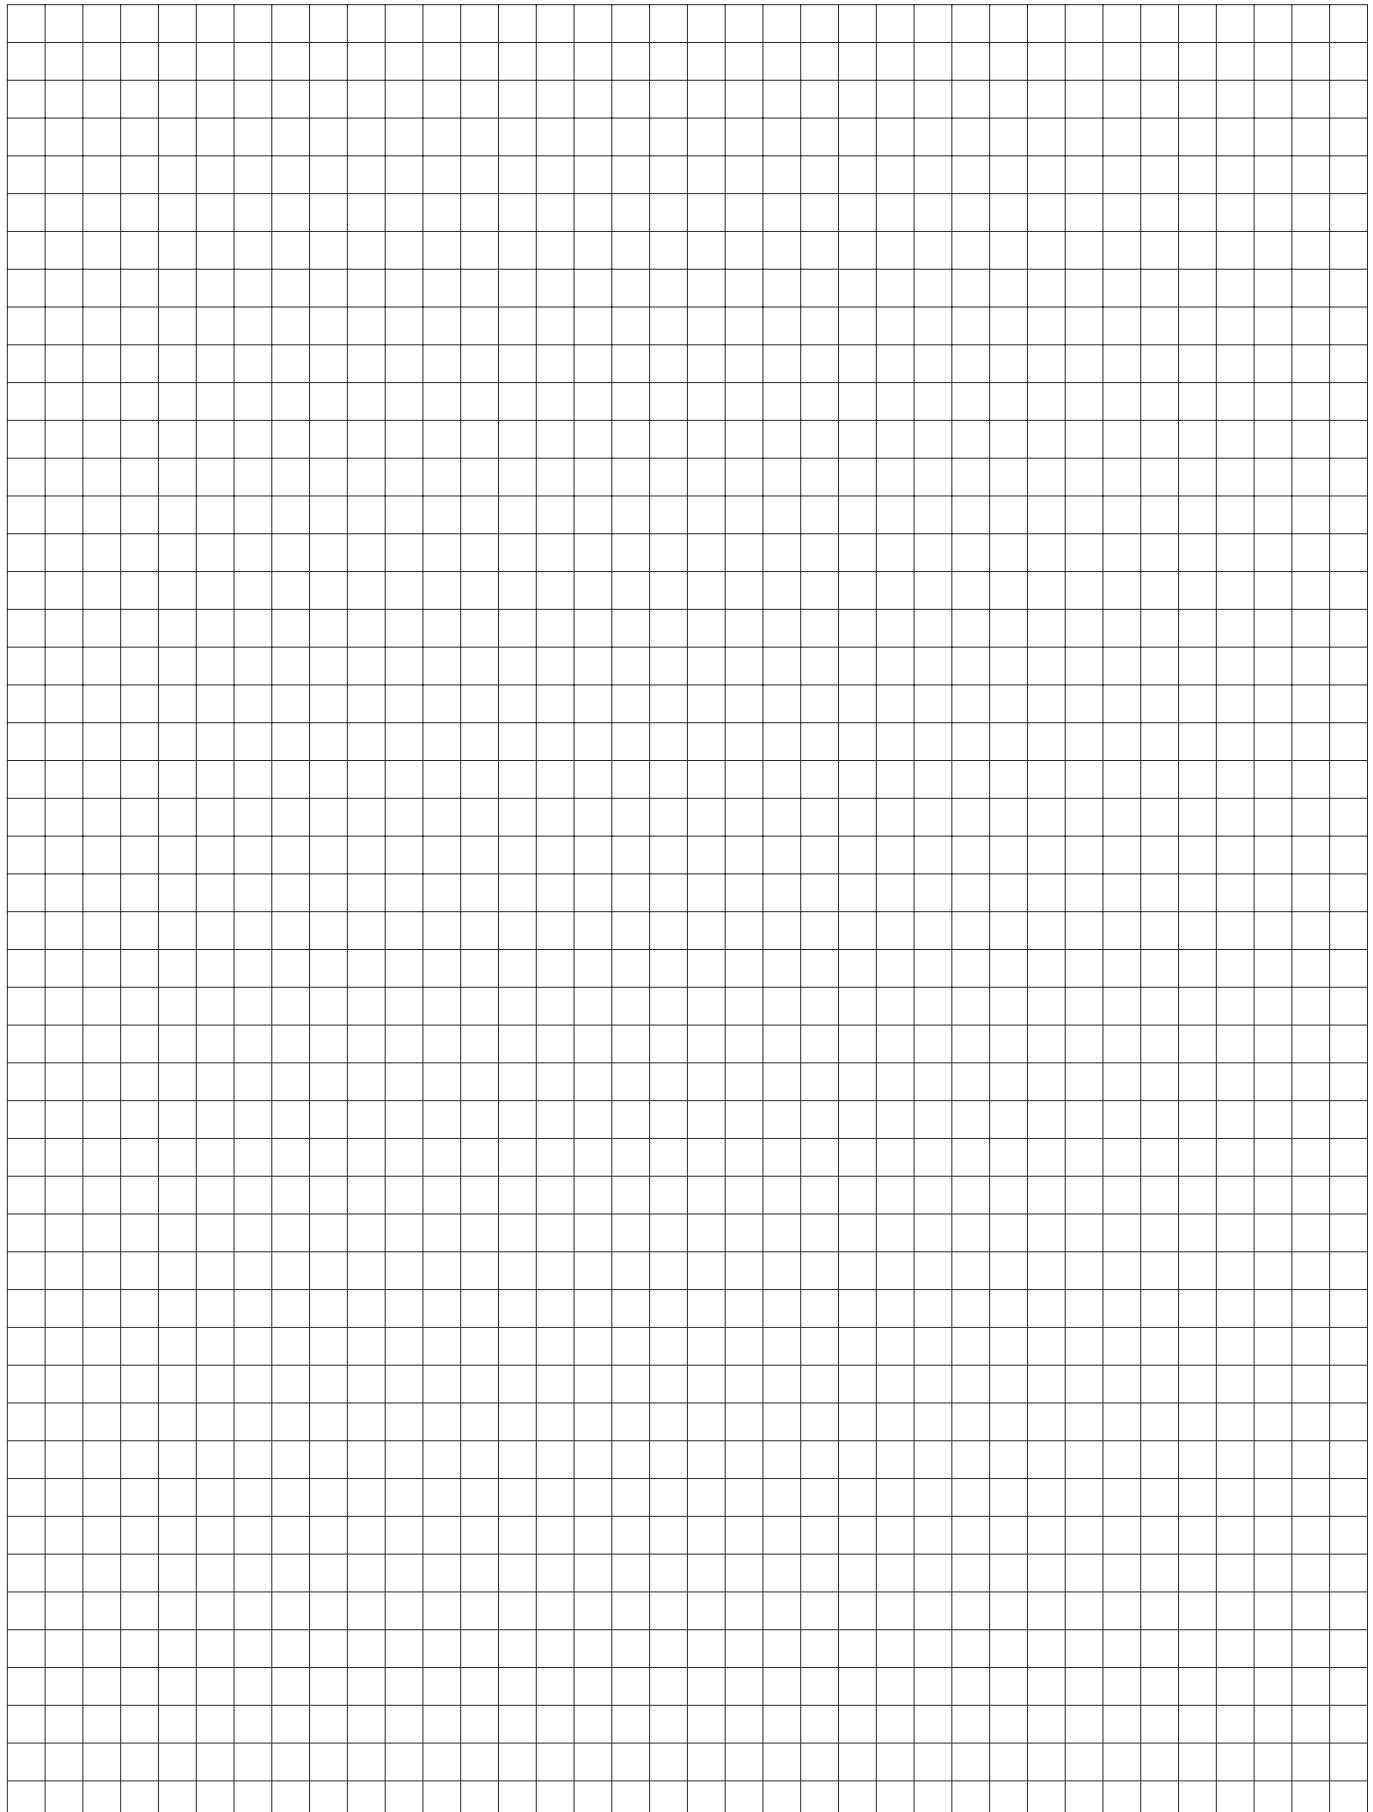

### **2.2. Programming software and documentation for ABB Procontic communication coupler**

(For further information please refer to the Order Details for the individual couplers)

SST 011 99

#### Man/machine communication

Operating Panels are used to observe machine statuses and intervene in machine routines.

##### *MMC units (Man/Machine Communication)*

MT30/45

MT65

MT91

Operating Panels MT30, MT45, MT65 and MT91 communicate using active drivers with controllers ABB Procontic T200, CS31 and Advant Controller 31.

This means that the MMC units have direct read and write access to all relevant data in the controllers. Consequently, there is no need for complex project planning instructions in respect of communication in the controllers.

With all the Operating Panels, communication takes place via the relevant programming interfaces or, in the case of MT45/65/91, via the optional ARCNET connection of the central unit.

The logically and ergonomically well-conceived operator prompting system of the terminals helps to optimise your production routines. The units feature sufficiently large operating keys which can be easily labelled for clear and unambiguous operation. The systematic colour coding of the operating keys means reliable operation of various machine routines by the operator.

Slide-in strips can be used to label the individual key areas, whilst still preserving enclosure IP 54 or 65.

Visually highlighted cursor keys featuring LEDs allow clear assignments of routines and provide visual assistance for operator prompting.

The softkeys which are mask-orientated on the MT91, provide the operator with further individual options for text displays as a function of machine statuses.

The text displays are 2-line on the MT30.

Up to 1000 texts can be saved in the 32 KByte EEPROM on the MT30. Depending on the selected font size (3 options), 8, 4 or 2 lines can be displayed by the operator on the text terminal MT45. Up to 100 process displays per language can be displayed on graphics terminal MT65 on the 256 x 64 pixel display. Up to 3 x 100 process displays and up to 6000 texts can be saved on the graphics terminal MT91.

#### **What you need for project planning:**

- **Editor for programming**

for MT30, MT45,  
MT65 and MT91

935SPSPLUS Win

- **Programming cable**

VB30 (MT30, MT45, MT65, MT91)

- **Interface cable for Advant Controller 31 (CS31)**

Series 90

VB86 (MT30, MT45, MT60, MT91)

Series 90 with MODBUS  
coupler (07KP93)

VB58 (MT30, MT45, MT60, MT91)

- **Interface cable for T200**

VB43 (MT30, MT45, MT60, MT91)

### Operator control units - performance class Text

- Active communication concept
- Text polling by programmable controller, function keys or cursor
- Integral interference bit processing
- Histogram memory (up to 170 entries)
- Free variable insertion and editing (max. 15 per text)
- Dynamic menu branching
- Internal function key and softkey project planning
- Project planning for 3 languages
- ladbare Gerätetreiber cs 31, T 200, MODBUS (Master/Slave) und ARCNET (Profibus-DP in preparation)

**Important Note:** Operator control units with a CS31 driver can be used only in conjunction with central units 07 KR 91, 07 KT 92, 07 KT 93 and 07 KT 94 and 07 KP 62 (T200)!

Lines/ Width (mm)	Char./ Height (mm)	Display type	Function/Alpha and System Keys/Softkeys	Unit driver/ Interface	Type	Order code	Wt. / piece kg
2/82.5	20/18	LCD	4/8/-	Loadable/RS232	<b>MT30</b>	<b>GATS 111 100 R 0001</b>	0.45
