New A 6760 Power Supply

A6760 power supply replaces old UES 815S power supply

With immediate effect, the new power supply A 6760 replaces the old UES 815S. Both power supplies have the same mechanical dimensions and the main electrical data of the A 6740 exceed the data of the UES 815S. The major difference between the power supplies is the pin allocation on the rear side.

If an old UES 815S has to be replaced, it is definitely necessary to change the existing wiring according to the diagrams shown below.

For further information feel free contact your local sales partner.
