3500/20 Rack Interface Module Datasheet

Bently Nevada Machinery Condition Monitoring

141531 Rev. C

Description

The Rack Interface Module (RIM) is the primary interface to the 3500 rack. It supports a proprietary protocol used to configure the rack and retrieve machinery information. The RIM must be located in slot 1 of the rack (next to the power supplies).

The RIM supports compatible Bently Nevada external communications processors such as TDXnet, TDIX, and DDIX. While the RIM provides certain functions common to the entire rack, the RIM is not part of the critical monitoring path and has no effect on the proper, normal operation of the overall monitoring system. One RIM is required per rack.

For Triple Modular Redundant (TMR) applications, the 3500 System requires a TMR version of the RIM. In addition to all the standard RIM functions, the TMR RIM also performs "monitor channel comparison." The 3500 TMR configuration implements monitor voting using the setup specified in the monitor options. Using this method, the TMR RIM continually compares the outputs from three (3) redundant monitors. If the TMR RIM detects that the information from one of those monitors is no longer within a configured percent of the information of the other two monitors, it will flag that the monitor is in error and place an event in the System Event List.

Specifications

Inputs

Power Consumption	4.75 watts, typical
Data Front panel	
Standard	RS232 serial communications
Data Rate	38.4 k baud.
I/O modules	
Standards	RS232/RS422 serial communications Internal modem communications
Data Rate	38.4 k baud maximum,serial communications 14.4 k baud, internal modem communications.

Outputs

Front Panel LEDs	
ok led	Indicates when the RIM is operating properly.
TX/RX LED	Indicates when the RIM is communicating with other modules in the 3500 rack.
TM LED	Indicates when the 3500 rack is in Trip Multiply.
CONFIG OK LED	Indicates that the 3500 rack has a valid configuration.
I/O Module OK Relay	Relay to indicate when the 3500 rack is operating normally or when a fault has been detected within the rack. User can select either an "OPEN" or "CLOSED" contact to annunciate a NOT OK condition. This relay always operates as "Normally Energized".
OK relay	Rated to 5A @ 24 Vdc/ 120 Vac, 120 Watts/600 VA Switched Power.
Normally closed contacts	Arc suppressors are provided.

Controls

Front Panel	
Rack reset button	Clears latched alarms and Timed OK Channel Defeat in the rack. Performs same function as "Rack Reset" contact on I/O module.

Address	Used to set the 63 possible rack
switch	address.
Configuration Keylock	Used to place 3500 rack in either "RUN" mode or "PROGRAM" mode. RUN mode allows for normal operation of the rack and locks out configuration changes. PROGRAM mode allows for normal operation of the rack and also allows for local or remote rack configuration. The key can be removed from rack in either position, allowing switch to remain in either RUN or PROGRAM positions. Locking switch in the RUN position allows you to restrict unauthorized rack reconfiguration. Locking switch in PROGRAM position allows remote configuration of a rack at any time.
I/O Module Sys	stem Contacts
Trip multiply	Used to place 3500 rack in Trip Multiply.
Alarm inhibit	Used to inhibit all alarms in the 3500 rack.
Rack reset	Used to clear latched alarms and Timed OK Channel Defeat.
Maximum Current	<1 mA dc, Dry Contact to Common.
RS232/RS422 Switch (RS232/RS422 I/O module only)	Used to select between RS232 and RS422 for communications with the Bently Nevada host software.
