

# Emulex HBA Capture

## Powerful Diagnostic and Troubleshooting Application for Emulex Adapters

### Key Benefits

- Aids in rapid troubleshooting of issues by Broadcom and server OEM support personnel
- Provides a single, zipped file with the information needed to accurately diagnose and address system problems
- Capture a *snapshot* of your system without having to individually collect logs and dump files
- Avoid downtime by collecting the information needed for fast technical support resolution

### Key Features

- Quickly captures all available configuration files, dump files, and log files for a single snapshot of your system
- Easily installed as a single .exe file
- Offers firmware-level diagnostics
- Runs from any directory or folder on your computer
- Performs both a live and a dead core dump on Emulex adapters
- Captures 24 different components, including driver settings
- Creates a single, zipped file for Broadcom or server vendor technical support

### Minimize System Downtime by Collecting All of the Adapter, System, and Management Data Needed for Resolution

Emulex<sup>®</sup> HBA Capture, formerly known as OneCapture, is an adapter device driver utility that collects information from the operating system, Emulex software, and Emulex adapters to speed troubleshooting. With one-click Emulex HBA Capture provides a snapshot of your system, which can be used by Broadcom and server OEM technical support to quickly diagnose and correct a number of issues.

### Information Collected

- System inventory
- PCI information
- CPU information
- Driver configuration
- Hardware device map
- HBAs list and attributes
- Settings known to Emulex HBA Manager
- Emulex HBA Manager installer log
- Adapter core dumps

### Operating System Support

- Windows
- Linux
- FreeBSD
- Solaris
- VMware ESXi
