

# Pneumatic Wafer Thin Ball Valve **INSTRUCTION MANUAL**

**dc DELCO**

Specialized Control Valve Manufacturer

## Introduction

Pneumatic thin ball valves have a compact valve body structure and short axial length, making them suitable for installation in pipelines with limited space, especially for quick opening and closing of lightweight gases or liquids such as compressed air and water. Structural features: Lightweight design, commonly threaded or flanged connections, sealing material mostly PTFE, temperature resistance range -20 °C~180 °C. Application scenarios: Compact piping systems in ships, energy equipment, and automated production lines.

## Main Parts Materials

UNIT:mm

NO.	Name	Material
1	Body	Stainless Steel 304, 304L, 316, 316L
2	Ball	Stainless Steel 304, 304L, 316, 316L
3	Lining Material/Seat	PTFE, PPL
4	Packing	PTFE
5	Cap	PTFE
6	Stem	Stainless Steel 304, 316, 316L
7	Connecting Set	Stainless Steel 304, 316
8	Screw	Stainless Steel 304, 316
9	Pneumatic Actuator	AT Series
10	Location Indicator	Plastic

## Main Outline and Connecting Flange Size 1.6MPa

MODEL	DN25	DN32	DN40	DN50	DN65	DN80	DN100

## Uses and Structural Features of Product

Pneumatic ball valve series are widely used in natural gas, oil, chemical industry, metallurgy, papermaking, power, mining, printing and dyeing, biological pharmacy, daily chemicals, foodstuff and beverage, water treatment and air treatment etc. For the automatic or adjustment control of fluid, together with automatic pneumatic meters.

The Structural Features of Pneumatic Ball Valves Series:

Pneumatic Actuator uses new-style AT pneumatic actuator, provided with both double-acting and single-acting types (spring reposition), driven by gear and rack with high dependability; big diameter valves are driven by AW pneumatic actuator on pul-extraction manner, with reasonable structure and large output torque as well as both double-acting and single-acting types (spring reposition). Refer to our stylebook of pneumatic actuator for more details information.

- **Shell Structure:** As per users' requirements and real working conditions, fixed ball valves can be designed to three structures including cast, forged and full welded, and valves of full-welded structure are mainly applicable for buried use.

**Unique Sealing Structure of Valve Base:** Floating ball valve adopts the structure of lip-type elastic sealing ring to insure the sealing dependability. For ball valves used in low-tension, ultra-low-tension or vacuum conditions, the valve-base sealing structure with leaf spring loading is adopted to maintain long-time reliable sealing. The valve-base of high-or medium-temperature ball valve may use para-position polyphenylene or metal material.

According to the difference in pressure, medium character and sealing requirements, fixed ball valve may choose structures of front-ball sealing back-ball sealing or front-back double sealing. The valve base of high-or medium-temperature ball valve may use para-position polyphenylene or metal material.

- **Obstruction and Drainage:** When valve is in off-position, the valve bases at upper and lower stream will interdict the fluid, and the deposit in the cavity may be discharged by drainage device.

**Automatic Pressure-relieving Structure:** In case of abnormal rise of pressure occurred in clack cavity, the mediums in it may drive the valve base with its self-thrust to realize automatic pressure relief, thus to ensure the safety of valve body.

- **Reliable Sealing of Stem:** Valve stem adopts the downward installation structure with back seating. The sealing power increases along with the rise of medium pressure, thus to ensure reliable sealing of valve stem, in addition, stem will not burst forth in case of abnormal pressure rise.

- **Fireproof Structure:** Fireproof structure may be adopted for ball valve as per working conditions and users' requirements, The fireproof design conforms to API 6D and JB/T6899 standards etc. In case of soft seating ring being damaged in fire, the fireproof structure can stop the large leakage of medium, thus to avoid further expansion of fire.

- **Anti-static Structure:** When operating, the friction between sphere and base may cause static charge accumulated on the sphere. To avoid static spark, static device is provided on the valve to educt the electric charge on the sphere.

- **Full Bore Structure and Reduced Bore Structure:** These two series are offered to meet users' different requirements. The passage inside diameter of full bore ball valve is the same as that of pipe, making it convenient for control and cleaning, The weight of reduced bore ball valve is relatively smaller, but the fluid resistance is only around 1/7 of that of stop valve with the same caliber. Therefore, the application prospect is much better for the latter.

## Products Performance Specification

Pressure grade		Nominal Pressure PN(MPa)					Pound(Class)			
		1.6	2.5	4.0	6.4	10.0	150	300	400	600
Test Pressure (MPa)	Shell test	2.4	3.75	6.0	9.6	15.0	3.03	7.5	10.2	15.0
	Sealing test	1.76	2.75	4.4	7.04	11.0	2.2	5.5	7.48	11.0
	Air Sealing Test	0.6 (MPa)								
Applicable medium		Material of Valve Body								
		CARBON STEEL			STAINLESS STEEL 304			STAINLESS STEEL 316		
		Water, Steam, oil and liquefied gas etc.			Corrosive mediums such as nitric acid etc			Corrosive mediums such as nitric acid etc		
Special Medium		Natural gas containing sulphureted hydrogen; transportation system for coal powder or aluminum powder used for the smelting of steel and non-ferrous metal; mediums used for the transportation of paper pulp in papermaking industry as well as other mediums containing granules or staple fiber etc.								

## Double Acting Actuators

**CCW PN (MPa)**

Air to Port A forces the pistons outwards, causing the pinion to turn counterclockwise while the air is being exhausted from Port B.

Air to Port B forces the pistons inwards, causing the pinion to turn clockwise while the air is being exhausted from Port A.

**CW (Class)**

Air to Port A forces the pistons outwards, causing the pinion to turn clockwise while the air is being exhausted from Port B.

Air to Port B forces the pistons inwards, causing the pinion to turn counterclockwise while the air is being exhausted from Port A.

## Output Torque of Double Acting Actuators

### Selection of Double Acting Actuator:

The suggested safety factor for double acting actuators under normal working conditions is 20%-30%.

Example:

- The torque needed by valve=100N.m
- The torque considered safety factor(1+30%)=130N.m
- Air Supply=5Bar

According to the above table, we can choose the minimum model is AT160DA.

## Spring Acting Actuators

Air to port A forces the pistons outwards, causing the springs to compress. The pinion turns counter clockwise while air is being exhausted from port B.

Loss of air pressure on port A, the stored energy in the springs forces the pistons inwards. The pinion turns clockwise while air is being exhausted from port A.

Air to port B forces the pistons outwards, causing the springs to compress. The pinion turns counter clockwise while air is being exhausted from port B.

Loss of air pressure on port B, the stored energy in the springs forces the pistons inwards. The pinion turns clockwise while air is being exhausted from port A.

## Output Torque of Spring Return Actuators

### NOTE:

Make sure that the torque necessary to operate the valve is compatible with the actuator torque (It depends on both actuator type and air supply).

Please note that the requested torque depends not only on the valve, but on the working conditions and the safety margins of the plant in question, too.

## Selection of Single Acting Actuator

The suggested safety factor for spring return actuator under normal working conditions is 30%-50%.

Example:

The torque needed by valve=80N.m

The torque consider safety factor=80(1+30%)=104N.m

Air Supply=5Bar

According to the table of spring return actuators' output, we find output torque of AT140SR K7 is: Air stroke 0° =308N.m

Air stroke 90° =247N.m

Spring stroke 90° =181N.m

Spring stroke 0° =120N.m

All the output torque is larger than we needed.

Attention:

During the spring reset of the single acting actuator, the actuator B port ventilation does not affect the actuator output torque, instead, it helps the spring reset.

5 Springs

6 Springs

7 Springs

8 Springs

9 Springs

10 Springs

11 Springs

12 Springs

During selecting the spring return actuators, we can choose the more reasonable and more economical actuators, if we know the different torque needed by the valve working at opening, operating and closing.

Example:

The max torque needed by the butterfly valve=104N.m

The torque after opened (operating) 104x30%=32N.m

Air Supply=5Bar

We can select the AT125SR K11 output torque is:

- Air stroke 0° =136N.m >104N.m
- Air stroke 90° =78N.m >32N.m
- Spring stroke 90° =173N.m >32N.m
- Spring stroke 0° =115N.m >104N.m

The above data show the actuator's torque can satisfy the requirement of the butterfly valve.

**Example.**  
 Butterfly valve original maximum torque = 104N.m  
 Opened torque  $104 \times 30\% = 32\text{N.m}$   
 Air pressure = 5Bar  
 We can choose AT125SRK11  
 Air stroke  $0^\circ = 136\text{N.m} > 104\text{N.m}$   
 Air stroke  $90^\circ = 78\text{N.m} > 32\text{N.m}$   
 Spring stroke  $90^\circ = 173\text{N.m} > 32\text{N.m}$   
 Spring stroke  $0^\circ = 115\text{N.m} > 104\text{N.m}$   
 The above data shows that it can meet the normal opening and closing of this butterfly valve.

### Operating Conditions

1. Operating media  
 Dry or lubricated air, or the non-corrosive gases the maximum particle diameter must be less than  $30 \mu\text{m}$ .
2. Air supply pressure the minimum supply pressure is 2.5 Bar, the maximum supply pressure is 8 Bar.
3. Operating temperature  
 Standard:  $-20^\circ\text{C} \sim +80^\circ\text{C}$   
 Low temperature:  $-35^\circ\text{C} \sim +80^\circ\text{C}$   
 High temperature:  $-15^\circ\text{C} \sim +150^\circ\text{C}$
4. Travel adjustment  
 Have adjustment range of  $+5^\circ$  for the rotation at  $0^\circ$  and  $90^\circ$
5. Application  
 Either indoor or outdoor.

### Operating Type (Single Action And Double Action)

- Air supply connection is designed in accordance with NAMUR Standard to install solenoid valves.
- The Namur drive pinion and the Namur top mounting connection permit direct installation of accessories such as limit switch box and positioner.
- Bottom mounting connection is designed in accordance with ISO5211 and DIN3337 standards for direct mounting with valve gear boxes or mounting brackets
- Each actuator is marked with a serial number, air connection and bottom mounting holes are marked for easy track and distinction.

## Temperature Rating of Seat Sealing Material

Code	Material	(°C) Applicable Temperature
F	Reinforced Polytetrafluoroethylene(PTFE)	-40~180
P	Para-potion polyphenylene	-40~285
Y	Hard Alloy	-40~425

According to the diferent control and the request can choose the following accessories:

**Cut-off Accessories:** Single coil solenoid valve, Double electrically-controlled Solenoid valve, Limit Switch

**Adjusting Accessories:** Electropneumatic positioner, Pneumatic positioner, Electric-pneumatic Converter.

**Air-supply Treatment Accessories:** Air-filtering reducing valve, F.R.L.

**Manual Device:** HKCT Series
