Hydraulic Safety Valve 液压安全阀•动力十足 Strong & Powerful

Brand Promise

■ 主溢流阀
管控主液压系统最高压力，决定挖掘、举升动力。压力过高易损管路、泵与马达；压力过低则整机乏力。
-Main Relief Valve
Controls maximum pressure of main hydraulic system, determining digging & lifting force. Excess pressure damages pipes, pumps and motors; insufficient pressure leads to weak performance.

■ 先导溢流阀
限定先导油路压力，保护操作手柄、电磁阀及油管。故障会造成手柄沉重、动作迟滞、电磁阀失灵。
-Pilot Relief Valve
Limits pressure of pilot circuit to protect handles, solenoid valves and pipelines. Malfunction causes stiff operation, sluggish movement and faulty solenoid valves.

■ 过载溢流阀
单独管控单路油路压力，保护对应执行机构。单阀故障仅影响对应动作，其余功能正常。
-Overload Relief Valve
Regulates pressure for individual circuit. Fault only affects the corresponding movement while others work normally.

• SOLENOID VALVE

Solenoids are the excavator's sensory parts.Pump side handles power, valve banks control movements, pilot valves keep it safe, and engine bay parts run auxiliaries.Learn their positions and jobs to fix faults fast and work more efficiently.

电磁阀就像挖机的神经节点。泵体这边管动力，阀组管各类动作，先导阀负责安全防护，发动机舱的管控附属部件。摸清它们的安装位置和作用，就能快速排查故障，修机更高效。
