

ZMJ100XDR Density Monitor

ZMJ100XDR Density Monitor

Description

ZMJ100XDR Density Monitors are used to monitor SF₆ gas density in sealed tanks. They are applied to indicate the gas density and to provide signal outputs when the density reaches the set values. Furthermore, it can transmit the real-time SF₆ gas density data remotely, to achieve online remote monitoring function. They are designed to monitor High Voltage systems. They can provide multiple solutions to support new substations and the renovation and upgrading of existing substations.

ZMJ100XDR density monitor meets the requirements of the National grid "QGDW123554-2023 Smart substation technical specification Part 4: Digital remote transmission meter".

Features

- Higher accuracy from reference chamber temperature compensation technology.
- Suitable for indoor or outdoor installation.
- Micro-switch that can switch freely between normally open and normally closed points.
- Up to 4 set of contacts, can achieve a variety of options such as double alarm and double lock, more safe and reliable monitoring.
- High shock resistance. No need to fill oil, no potential oil leakage.
- Normally closed contact will not false alarm due to vibration. RS485 bus interface, easy to do the system expansion, and
- to achieve telemetry, remote control functions. Strong EMC capability.
- ±1%FS display in full range, higher remote transmission module accuracy, higher indication and remote data consistency accuracy.
- More accurate gauge indication values and contact switching values throughout the temperature range.
