

Functional description:

- 1. Expanding the conference system's capacity allows for connecting additional conference microphone units via the conference expansion host.
- 2. Utilizes dedicated 6-core cables to ensure reliable long-distance transmission of conference information while delivering perfect audio quality.
- 3. The housing is constructed from metal materials, with both the circuitry and housing reinforced to ensure a secure connection to the ground wire, guaranteeing an anti-static capability of 6000V.
- 4.The 4.2U metal chassis can be mounted in a standard 19-inch rack for easy placement and equipment maintenance.
- 5. Built-in universal power supply;
- 6. Supports three-channel synchronous expansion, supporting expansion of up to 128 units.

Technical specifications:

Main power supply	90~132VAC/180~264VAC by switch
Maximum power consumption	350W
Output Power	≤110W/36V per channel
Connection Method	Specialized Cable (6-core)
RJ45 Ethernet port	Connect the host and subordinate expansion hosts
Finish Color	Black
