

Functional description:

- 1.Connected via CAT5 cable
- 2.Powered directly by the matrix host
- 3.Supports 6 music source selection and volume control
- 4.Touch screen control panel

Technical description:

1. Connection Mode

The device adopts standard CAT5 cable for data and signal transmission. It features stable transmission performance and strong anti-interference capability, adapting to conventional indoor system wiring and long-distance signal transmission requirements.

2. Power Supply

Supporting direct power supply from the audio matrix host, no independent external power adapter is required. The centralized host power supply simplifies on-site wiring, improves system integration, and facilitates daily equipment maintenance and system troubleshooting.

3. Audio Control Function

It supports selection and switching of 6 independent music sources, and comes with precise local volume control function. Users can freely switch different background music sources and adjust the output volume on the device side to meet diversified audio playback and volume management demands.

4. Operation Panel

Equipped with a high-sensitivity touch screen control panel, replacing traditional physical buttons. It provides intuitive, flexible and smooth human-computer interaction, supports one-click music source switching and fine volume adjustment, with simple and elegant overall operation.
