

Cryotherapy Chamber

(Economical Style)

Model:uCyro C8

About Cryotherapy Therapy:

Ultra-low temperature therapy technology is a secret weapon for anti-aging, which narrows blood vessels and slows down blood flow and metabolism through the extreme low temperature inside the cabin, achieving anti-aging effects.

Due to the body cooling caused by whole body cryotherapy, it leads to an increase in basal metabolic rate, single dose whole body cryotherapy has been proven to burn an additional 500-800 calories in the body. The base metabolic rate measured by indirect calorimetry shows that even within a few weeks after a course of treatment, it can increase by 200-300 calories per day. Without changing diet, this means that you can burn 2 pounds of body fat per month without dieting or exercising.

Features:

- 9 major technologies: 9 major patented technologies, super worry-free full-automatic, liquid nitrogen replacement reminder, etc.
- Exclusive Patented Appearance: Completely independent intellectual property rights, independently developed
- Perfectly integrated into various places: Luxury and atmospheric appearance. Perfectly integrated into various places
- Luxury manufacturing process: Sedan-level process manufacturing technology, adhering to the spirit of craftsmanship, carefully polished and placed in every venue is a refreshing highlight.
- Advanced control system:
- 5 major invention patents, 4 major software control copyrights, completely independent

development and design to master the core and leading technology, allowing users to easily get started.

-Intelligent one-key start and stop Automatic pre-cooling in advance

Specification:

Index	Content
Model Name	uCyro C8
Size	L1450*W780*H1980mm
Weight Capacity	240KG
Color	White and Black or customize
Interior	fully with high grade synthetic leather
Exterior	Fully metal
Maximum capacity	1 person
Temperature Range	-170~-130°C
Liquid nitrogen consumption	1.1/Minute
Cold therapy duration	3-5 minutes(two modes can be freely switched, and can be stopped at any time during the process)
Liquid Nitrogen Consumption per session	3-5L
Pre cooling time	1 minute
Refrigerant	liquid nitrogen
Power supply voltage	110V-220V/50Hz
Thermal insulation coefficient	0.01w/(m.k)
Weight Capacity	240KG
Color	White and Black or customazie

Configuration List

Index	Specification	Unit	QTY
Chamber	L1450*W780*H1980mm	set	1
vacuum hose		set	1
power cable		set	1
Operation and Maintenance Manual		set	1
