

The Experience Guide of IOT System

Welcome to our IOT mobile system, For your better experience, let me explain the basic usage of this app.

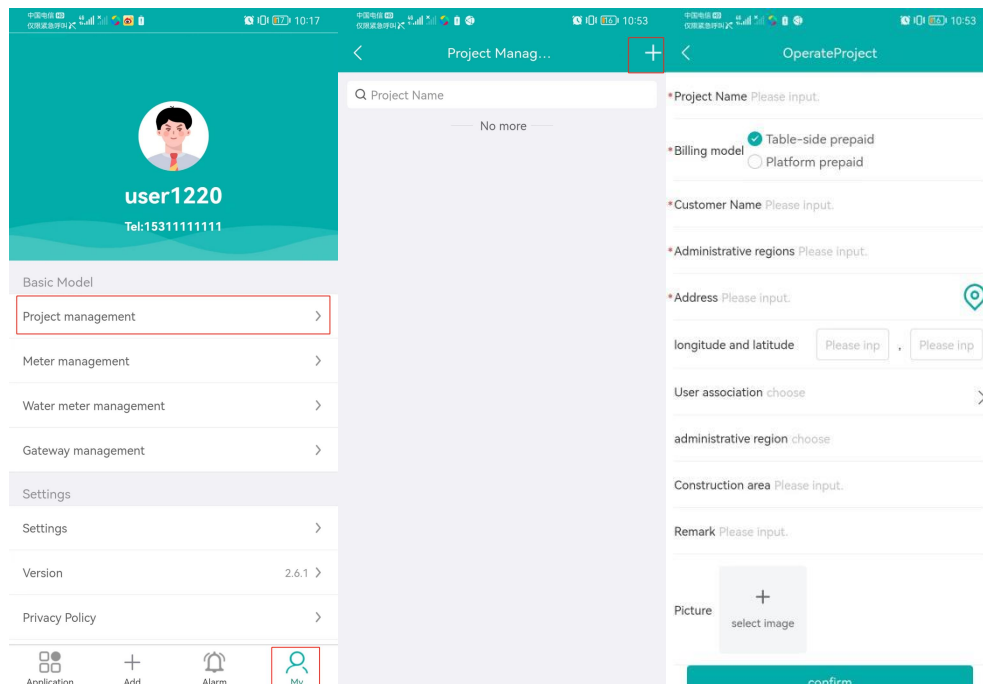

When you enter the App for the first time, you need to click here in our login page to start the account registration.

After completing the registration, system will automatically jump back to the login page which needs the account and corresponding password you just registered to enter the system homepage.

Now we can start to create a new project. Add a new project in the project management of Personal Center. Fields with asterisks are required when adding a new project.

Finally, add new equipment in the project. This step is mainly completed by scanning QR code and barcode. After scanning, we will get the gateway number. We should put the device in the new project by choosing the project we just created.
