

BUSH HAMMER

QUANZHOU SUNNY SUPERHARD TOOLS CO., LTD

Brief Introduction

SUNNY SUPERHARD TOOLS CO., LTD, established in 1993, has been developing bush hammer since 2010. In the past ten years, we have gradually become the most professional supplier of bush hammer in China.

Bush hammer is widely used in the surface processing of various types of stone and concrete, it is mainly used in the processing of slip-resistant, bush-hammered and imitation of natural erosion surfaces. With efficient and safety of the machine, it gradually replaces the manual machine as an indispensable tool in surface processing. According to different texture requirements, we are committed to studying on different products corresponding to various textures. Nowadays, our product lines of bush hammer have over hundreds of products, which could fulfill corresponding requirements.

The greatest feature of our company is in the ability of researching and developing. But unlike the other competitors who make general standardized products with unified production compound, we are inclined to OEM/ODM, formulate the exclusive products according to the different demands of customers, which also becomes the difference between us and other general foundry factories.

SCRATCHING ROLLER

PRODUCT INTRODUCTION

6FA30143

6FB20303

The Scratching Roller bridge can be fixed on cutter or banner tile cutter. It is designed to be used for 1-10mm fine grooved finish on marble, limestone and granite. The segment can be turned 3 times, all four angles can be used. The core usually lasts quite long, you just need to buy the segment and some accessories for your further demand.

TOOLS DIMENSION

Φ300x140/240 mm for bridge cutter

Φ204x306/620 mm for banner tile cutter

TEXTURE

1-10mm fine grooved finish

PERFORMANCE

- Uniform finish over whole slab surface.
- Different distance of line-finish could be made by one tool.
- Each segment is selected by prime material, all four angles can be used.
- High efficiency, Longer lasting, Less investment.

02 SCRATCHER

PRODUCT INTRODUCTION

The Scratcher is normally fixed on angle grinder or CNC cutter, to texture for adze finish on marble and limestone. Each slab would be processed by master worker's inspiration, each finish could be a unique artwork.

The cost efficiency of scratcher is impressive, all four angles of segment can be used. You will get an undulating finish like natural wind or water erosion which is mainly used for wall decorating or slip-resistant floor.

03 MANU-BLASTER

PRODUCT INTRODUCTION

The Manu-blaster is designed for portable applications, such as renovation or repairing on bush-hammered surface. It is normally fixed on angle grinder or some other portable grinder.

After grinding by Manu-blaster, you will get a regular bush-hammered or different roughness of hammered finish. But of course, the portable grinder creates more different possibilities by using with different accessories, such as, slab with parallel finish or different roughness of texture.
