注意事项

Matters needing attention

- 负载电流高于5A时必须使用散热器，固态继电器底板与散热器安装面之间涂上导热硅脂，40A以上加风扇强冷或水冷。
 - 使用在感性负载时，需要在输出端接入双向稳压二极管或压敏电阻(MOV)。压敏电阻推荐取额定电压的1.6-1.9倍。
 - 为了避免固态继电器的温升超过允许值，两只或多只固态继电器并排安装时，应留有适当的间距。
 - 当使用多只固态继共用一个控制电源时，输入端即可以串联使用也可以并联使用。
- When the load current is higher than 5A, the heat sink must be used. Apply thermal grease between the solid state relay bottom plate and the heat sink mounting surface, and add strong fan cooling or water cooling above 40A.
 - When used in inductive loads, it is necessary to connect a bidirectional voltage regulator diode or varistor (MOV) at the output end. The varistor is recommended to be 1.6-1.9 times the rated voltage.
 - In order to avoid the temperature rise of the solid-state relay exceeding the allowable value, two or more solid-state relays should be installed side by side with appropriate spacing.
 - When multiple solid-state relays are used to share a control power supply, the inputs can be used in series or in parallel.
